

About

This diagram aims to explain the logic of the Sencha gui for the new permanent process management system in LHCb.

For more details about the application build process and order of execution, please consult sencha docs and readme files in root of the app.

File naming

All of the files are named in specific manner:

`<app_name>.<folders>...<file_name>`

In this pattern, the root folder is /app folder insid the applications directory. File names are stripped of their extensions (no .js or .html in the naming pattern).

Layout

The following diagram represents all aspects of the GUI, the blocks are placed more or less in the same region of the diagram as their representation in the GUI screen.

The central item is the Main.js file, which is also the mother instance of all the GUI items.
